

## CAREER FUNNEL (Least preferred)

---

Jobs in the architecture and construction career cluster involve designing, planning, managing, building, and maintaining the built environment.

### Career Pathways in Architecture and Construction

A career pathway is an area of concentration within a career cluster. Each pathway contains a group of careers requiring similar academic and technical skills as well as similar industry certifications or postsecondary education. The architecture and construction career cluster has three pathways: preconstruction and design, construction, and maintenance and operations.

- **Preconstruction and Design:** This pathway encompasses all the jobs that are done before a project can be built.
- **Construction:** The construction pathway includes all the jobs involved in actual construction, from demolition to finish carpentry.
- **Maintenance and Operations:** This pathway contains all the jobs related to maintaining, repairing, and upgrading structures.
